

ARTHUR OKOLO

BACKEND & ANDROID DEVELOPER

Lagos, Nigeria | arthurokolo97@gmail.com | [linkedin.com/in/okolo-arthur](https://www.linkedin.com/in/okolo-arthur) | github.com/okoloarthur | okoloart.github.io

Backend engineer specializing in scalable RESTful APIs with NestJS, TypeScript, and PostgreSQL, with production experience building fintech systems — AML transaction screening, recurring billing, multi-currency RBAC, and Flutterwave/Paystack payment integrations. Also an Android Developer with hands-on experience across social, marketplace, ride-hailing, and booking apps, including AI-powered feature integration and production crash resolution. Comfortable owning systems end-to-end across both the backend and mobile client.

SKILLS

Languages & Frameworks: Kotlin, Java, TypeScript, JavaScript, Node.js, NestJS, Express.js

Android Development: Jetpack Compose, Android SDK, MVVM, ViewModel, Room, Firebase, DataStore, Dagger-Hilt, Retrofit, OkHttp, Coroutines, Flow, XML, Material Design, Espresso

Backend & Databases: PostgreSQL, MongoDB, MySQL, TypeORM, Redis, REST APIs, JWT Authentication & Authorization, File Uploads, Pagination

Security & Auth: RBAC, MFA, OTP Authentication, OAuth/JWT, CORS, Helmet, Guards, Secure Coding Practices

Payments & Fintech: Flutterwave, Paystack, Recurring/Usage-based Billing, AML Transaction Screening, Multi-currency Support, Invoice Generation, Reconciliation

Reliability & Observability: BullMQ (message queues/background jobs), Datadog (observability), health check endpoints, audit-traceable event logging

AI & Integration: AI-powered feature integration (PaddiAI cross-vertical booking assistant), Daily use of Claude Code and AI coding assistants (Copilot, Cursor)

Tooling & Testing: Git, GitHub, Jest, Unit Testing, Integration Testing, Docker, Swagger/OpenAPI, Agile Collaboration (Scrum, Kanban)

Soft Skills: Technical Writing, Mentorship, Code Reviews, Cross-functional Collaboration

BACKEND EXPERIENCE

Backend Developer | Renegan

Sep 2025 – May 2026

- Implemented core fintech billing and payment infrastructure, including recurring payments, usage-based billing, and automated job processing with clear separation of concerns.
- Built and secured admin systems with multi-factor authentication (MFA), login gating, profile management, and event-driven notifications for RBAC and organizational activities.
- Developed and optimized billing and payment systems, including negotiated pricing models, retry/grace logic, and integration with Flutterwave.
- Integrated AML transaction screening and audit logging, enabling structured identity extraction and compliance-ready, traceable event monitoring.
- Designed currency-aware RBAC systems across billing, transactions, alerts, and reporting, with multi-currency support (NGN default).
- Refactored and enhanced payment and billing services (including Paystack), improving scalability, reliability, invoice generation, verification pipelines, and post-payment synchronization.

Backend Developer | Gemspread

Jun 2025 – Sep 2025

- Engineered authentication and role-based access control (RBAC) with JWT, guards, and security best practices.
- Designed and deployed scalable CRUD modules to support core business operations.
- Built and optimized a file upload service with Cloudinary integration, enabling bulk uploads, parallel processing, and automatic cleanup.
- Delivered core backend infrastructure: database migrations, health check endpoints, and API documentation with Swagger.

Backend & Blockchain Developer | AgroShop

Jan 2025 – Apr 2025

- Designed and implemented Algorand smart contracts for asset creation, purchase flows, and secure transaction lifecycle.
- Developed scalable NestJS + PostgreSQL backend, including cart, wishlist, order, and notification systems.
- Implemented OTP authentication, email services, and Cloudinary-based media uploads.
- Optimized product queries with filtering, pagination, sorting, and performance improvements.

Backend Developer | DaoWakanda

Oct 2024 – Feb 2025

- Enhanced API functionality by optimizing submission approval and review handling, and resolving internal server errors.

- Streamlined pagination and admin tools by adding paginated views, status-based filters, and proposal management.
- Designed user management APIs for seamless creation, retrieval, and updates of user data.
- Implemented robust handling of timestamps and optimized status logic for better system performance and reliability.

Backend Developer | BlockTrempp

Sep 2022 – Apr 2025

- Designed analytics endpoints with security features like two-factor authentication and checks to prevent duplicate business accounts, facilitating better data-driven decision-making.
- Enhanced user engagement by developing credit balance features, commission notifications, and optimizing active user counts.
- Built course recommendation and reminder systems, managed subscriptions, and boosted user trust.
- Refactored and optimized the commission email sending process, resolving circular dependency issues and enhancing system performance.
- Built a PDF microservice for document generation and implemented admin analytics dashboards with real-time subscription updates.
- Enhanced system security (2FA, password management, phone verification).

ANDROID EXPERIENCE

Android Developer | Gopaddi

Jan 2026 – Jul 2026

- Integrated AI-powered bookings (PaddiAI) across hotels, restaurants, vacation rentals, and packages, giving users a unified way to browse and book across verticals.
- Built a global search system (People, Posts, Marketplace, Suppliers) with end-to-end API integration.
- Implemented a dynamic Explore page with real-time content loading, trending feed, and hashtags.
- Engineered a scalable notifications system with FCM push, multiple types, and user preferences.
- Built an Active Center to manage active bookings across verticals, with modification and payment.
- Implemented identity verification (VerifyMe) with document upload and status tracking, plus dynamic bank account setup that adapts fields by region for multi-currency payouts.
- Delivered continuous UI/UX improvements and bug fixes across navigation, search, and social features.

Android Developer | Simpliride

Jun 2025 – Dec 2025

- Resolved major app crashes and optimized foreground services, geocoding operations, and ride timer synchronization for better responsiveness.
- Refactored and stabilized credit-based subscription, cash-out, and payment flows, integrating Paystack for secure and reliable transactions.
- Improved ride booking engine and promo code management, optimized RecyclerView item rendering, and standardized API response handling for consistent data flow.
- Implemented a deep link-based referral system and built referral data models to enable seamless tracking and engagement.
- Enhanced the user onboarding flow by enforcing SLA acknowledgment, adding validations, and validating phone numbers using Google libphonenumber.

Android Developer | MatchIT

May 2024 – Aug 2024

- Developed and improved multiple UI elements using Jetpack Compose, including profile and onboarding screens.
- Implemented custom UI components like step progress bars to enhance user experience.
- Worked closely with the backend team to integrate new match and user onboarding flows for the app.
- Fixed high-priority bugs and UI glitches, including layout misalignment, login crashes, and resource conflicts.

Android Developer | Upwork (Contract)

Mar 2023 – Sep 2023

- Developed a health and fitness tracking app focused on user engagement using Kotlin.
- Utilized Android Architecture Components such as LiveData and ViewModel for efficient and maintainable code, achieving a minimum of 90% code coverage.
- Optimized UI with Material Design and integrated AdMob for interstitial/native ads, demonstrating expertise in responsive design for various screen sizes and orientations.

Android Developer | HNG Internship

Oct 2022 – Dec 2022

- Enhanced user satisfaction and reduced app crashes by developing and maintaining Android applications using Kotlin and Dagger-Hilt.
- Improved project efficiency through regular code reviews and by leading a team to implement key enhancements.
- Minimized code errors for team members by providing effective mentoring and conducting detailed code walkthroughs.
- Boosted team productivity and earned a 4.5-star rating from mentors on project quality by leading a team to successfully complete a project within the established timeline.

PROJECTS

SwiftCart — [GitHub](#)

- E-commerce backend with user/product management. Built from scratch using NestJS and TypeORM, with JWT authentication and complex DB relationships.

Streamify

- Movie streaming app with Room, Retrofit, and Google Sign-In. Netflix-style UI built with Jetpack Compose and custom navigation.

CoinBuzz

- Real-time crypto app using Clean Architecture and biometric authentication, with real-time sync via DataStore and efficient network management.

EDUCATION

Enugu State University of Science and Technology

Bachelor of Architecture — Architecture

Google

Android Kotlin Developer Course; Android Development with Java
